

NEXUS PLATFORM (Investor & Entrepreneur Collaboration Platform)

Internship Project Documentation

1. INTRODUCTION:

Nexus Platform is a web-based collaboration system developed to bridge the gap between investors and entrepreneurs. The platform provides a centralized environment where entrepreneurs can present their ideas, communicate with investors, schedule meetings, exchange documents and simulate financial transactions.

The objective of this project is to create a professional business collaboration platform while implementing modern frontend development concepts using HTML, CSS, Bootstrap and JavaScript.

This project was developed as part of an internship program to demonstrate practical frontend development skills and real-world application design.

2. PROBLEM STATEMENT:

Many startups struggle to find investors and manage communication effectively. Traditional communication methods often lead to scattered information, delayed responses, and inefficient document management.

Nexus Platform addresses these challenges by providing:

- Centralized communication
- Meeting scheduling
- Secure document management
- Payment simulation
- Investor-entrepreneur collaboration

3. PROJECT OBJECTIVES:

The primary objectives of this project are:

- Create a modern and responsive web application.
- Connect investors and entrepreneurs.
- Enable meeting scheduling and management.

- Provide document upload and signature functionality.
- Simulate financial transactions.
- Implement role-based dashboards.
- Improve user experience through responsive design.

4. TECHNOLOGIES USED:

Frontend Technologies

HTML5

Used to create the structure of all web pages.

CSS3

Used for styling and layout design.

Bootstrap 5

Used for responsive design and pre-built UI components.

JavaScript

Used for interactive features and dynamic functionality.

5. DEVELOPMENT TOOLS:

- Visual Studio Code
- Git
- GitHub
- Live Server Extension
- Google Chrome Developer Tools

6. PROJECT MODULES:

Module 1: Landing Page

The landing page serves as the entry point of the platform.

Features

- Responsive Navigation Bar
- Hero Section
- Feature Highlights

- About Section
- Testimonials
- Footer

Purpose

Provides users with an overview of the platform and encourages them to proceed to authentication.

Module 2: Authentication System

The authentication module allows users to access the platform securely.

Features

- Email Input
- Password Input
- Password Strength Checker
- Login Validation
- OTP Verification

Validation Rules

- Email field cannot be empty.
- Password must contain at least 8 characters.
- OTP must be completed before dashboard access.

Demo Credentials

Email:

nexus24082004@gmail.com

Password:

2408

OTP:

24082004

Module 3: Dashboard

The dashboard acts as the control center of the application.

Features

- Sidebar Navigation
- Statistics Cards
- Role Selection
- Responsive Layout

Roles

1. Investor
2. Entrepreneur

Each role displays a customized dashboard experience.

Module 4: Meeting Scheduler

This module allows users to organize meetings.

Features

- Meeting Calendar
- Meeting Requests
- Accept Meeting
- Reject Meeting

Benefits

Improves communication between investors and entrepreneurs.

Module 5: Video Conference Simulation

A video call interface was developed to simulate online meetings.

Features

- Video Screen
- Microphone Toggle
- Camera Toggle
- End Call Button

Purpose

Provides a realistic meeting experience.

Module 6: Document Chamber

The document management system allows users to handle business documents digitally.

Features

- File Upload
- Document Preview
- Electronic Signature
- Status Tracking

Status Types

- Draft
- In Review
- Signed

Benefits

Reduces manual paperwork and improves efficiency.

Module 7: Payment Module

The payment module simulates financial operations.

Features

- Wallet Balance
- Deposit Funds
- Withdraw Funds
- Transfer Funds
- Transaction History

LocalStorage Integration

Balance and transactions remain available even after page refresh.

Module 8: OTP Verification

The OTP verification page adds an additional security layer.

Features

- Six Digit Verification Input

- Validation
- Dashboard Redirect

Purpose

Simulates Two-Factor Authentication (2FA).

Module 9: Dark Mode

A dark mode system was implemented to improve user experience.

Features

- Theme Toggle Button
- LocalStorage Support
- Persistent User Preferences

Benefits

Improves accessibility and usability.

Module 10: Responsive Design

The application is fully responsive.

Supported Devices

- Desktop
- Laptop
- Tablet
- Mobile Phone

Techniques Used

- Bootstrap Grid System
- CSS Media Queries
- Flexible Layouts

7. LOCALSTORAGE IMPLEMENTATION:

LocalStorage was used to preserve user data.

Stored Information

- Wallet Balance

- Transaction History
- Selected User Role
- Theme Preferences

Benefits

- Better user experience
- Data persistence
- Reduced data loss after refresh

8. PROJECT STRUCTURE:

Nexus Platform

```

|— index.html
|— login.html
|— otp.html
|— dashboard.html
|— meetings.html
|— videocall.html
|— documents.html
|— payments.html
|
|— css
| |— style.css
| |— responsive.css
|
|— js
| |— auth.js
| |— meetings.js
| |— video.js
| |— documents.js

```

| └─ payments.js

└─ images

9. LEARNING OUTCOMES:

This project helped in understanding:

- Frontend Development
- Responsive Design
- Bootstrap Framework
- DOM Manipulation
- Event Handling
- Form Validation
- LocalStorage
- Git & GitHub
- Project Organization

10. FUTURE ENHANCEMENTS:

The following features can be added in future versions:

- Backend Integration
- Database Connectivity
- Real-Time Video Calling
- User Profiles
- Messaging System
- Email Verification
- Push Notifications
- Payment Gateway Integration
- Cloud Storage
- Admin Dashboard

11. CONCLUSION:

Nexus Platform successfully demonstrates the implementation of a modern investor and entrepreneur collaboration environment. The project combines authentication, communication, document management, payment simulation, and responsive design into a single web application.

The project reflects practical frontend development skills and provides a strong foundation for future full-stack enhancements.
